ABOUT US

Who We Are

Oasis Agribusiness (U) Limited is a Ugandan agri-technology enterprise established in 2018, with its headquarters in Kole District, Northern Uganda. We are committed to transforming agricultural service delivery by connecting smallholder farmers to quality agricultural inputs, digital agricultural information, advisory services, financial linkages, and reliable produce markets.

Our business model integrates a community-based network of more than 100 Village Agents and rural outlets with our Oatech digital platform. Through this hybrid approach, we bring essential agricultural products, knowledge, and services closer to underserved farming communities, including women, young people, refugees, and host communities.

We operate across Northern Uganda, including the Lango, Acholi, Karamoja, and West Nile subregions, with a focus on strengthening agricultural productivity, improving farmer incomes, supporting rural entrepreneurship, and building climate-resilient agricultural value chains.

The Challenge We Address

Agriculture remains a major source of livelihoods and employment in Uganda. However, smallholder farmers and agricultural enterprises in Northern Uganda face persistent barriers that limit productivity, commercial growth, and job creation.

These challenges include limited access to affordable, quality agricultural inputs; inadequate working capital; high transportation and distribution costs; unreliable market access; limited access to timely weather and agronomic information; and insufficient access to practical agricultural advisory services.

Climate change compounds these challenges through unpredictable rainfall, prolonged dry spells, drought, pests, and crop diseases. Unsustainable land management and declining soil health can further undermine productivity and weaken the resilience of farming households.

Women and young people are particularly affected by barriers to productive resources, finance, skills, and profitable market opportunities. At the same time, agricultural SMEs often struggle to access the working capital and investment required to expand operations, strengthen supply chains, and create sustainable employment.

Oasis addresses these interconnected challenges through a commercially driven, technology-enabled model that connects farmers and rural enterprises to agricultural products, information, services, finance linkages, and markets.

Our Innovative Solution

We combines last-mile agricultural distribution, digital technology, extension support, and market linkages to improve the efficiency and inclusiveness of agricultural value chains.

Our integrated solution comprises:

I. **Agricultural inputs and services-** We facilitate access to certified seeds, agrochemicals, farm tools, and other essential agricultural supplies that help farmers meet their production needs.
II. **Digital agriculture through Oatech-** Our digital platform supports agricultural learning, farmer engagement, market information, and access to relevant weather and agronomic information.
III. **Village Agents and rural outlets-** Our community-based distribution network brings agricultural products and services closer to farmers while creating opportunities for local entrepreneurship and employment.
IV. **Produce aggregation and market access-**Through produce buying, grain aggregation, and buyer linkages, we support agricultural commercialisation and strengthen connections between farmers and markets.
V. **Agricultural advisory and plant health support-** We facilitate access to practical extension services, soil-health information, crop pest and disease management knowledge, and climate-smart farming practices.
VI. **Financial and insurance linkages-** We facilitate connections to relevant agricultural insurance and financial services to support risk management and improve access to resources for agricultural production and enterprise growth.

By integrating physical distribution with digital services and market connections, we aims to reduce access barriers, improve operational efficiency, and establish a scalable business model for underserved agricultural communities.

Our Contribution to Climate-Smart Jobs

Oasis recognises that sustainable job creation in agriculture depends on improving productivity, strengthening climate resilience, expanding markets, and building commercially viable rural enterprises.

Our contribution focuses on three interconnected areas.

Climate-Smart Agriculture and Farmer Resilience

We promote access to drought-tolerant and early-maturing seeds, integrated pest management practices, soil-health improvement methods, and timely digital weather and agronomic information.

These interventions are intended to help farmers make informed production decisions, manage climate-related risks, and improve the resilience of their farming enterprises.

We also recognise the importance of sustainable land management in protecting soil productivity and the natural resources on which agricultural livelihoods depend. We seek to strengthen the promotion of responsible farming practices through our distribution network, farmer engagement, and partnerships.

Agricultural Commercialisation and Market Development

By connecting farmers to agricultural inputs, advisory services, produce aggregation, and market opportunities, Oasis supports the development of more commercially oriented farming enterprises.

Our grain aggregation and produce marketing activities help strengthen market connections, while our Village Agent network supports the distribution of agricultural products and services into rural communities.

As the business grows, we aim to strengthen supply chains, expand market reach, improve service delivery, and increase opportunities for smallholder farmers and agricultural SMEs to participate in profitable value chains.

Rural Employment and Entrepreneurship

Our Village Agent and rural outlet model creates opportunities for local businesses to participate in agricultural input distribution, farmer engagement, and service delivery.

Our operations also support employment and enterprise opportunities across produce aggregation, logistics, agricultural extension, and digital agriculture.

We aim to expand these opportunities, particularly for women and young people, through stronger partnerships, business growth, skills development, and increased participation in agricultural markets.

Our approach recognises that climate-smart jobs must be commercially sustainable, inclusive, and resilient to changing environmental conditions.

Our Scale and Reach

We have established a growing rural distribution and service network comprising more than 100 Village Agents, supported by rural outlets, farmer groups, and digital channels.

Our activities extend across Northern Uganda, including Lango, Acholi, Karamoja, and West Nile with focus on underserved farming communities and work to improve access to agricultural services for women, youth, refugees, and host communities.

Our integrated model provides a platform for expanding climate-smart agricultural services and strengthening rural market systems.

As we grow, our priorities include increasing farmer access to appropriate agricultural inputs, expanding digital engagement, strengthening produce aggregation, supporting rural entrepreneurship, and deepening our contribution to inclusive economic development.

Our Business Sustainability and Growth Potential

Oasis operates a diversified agribusiness model with revenue-generating activities in agricultural input distribution, produce buying and grain aggregation, and ICT-enabled services.

The integration of physical distribution and digital engagement enables us to serve farmers through multiple channels while building relationships across agricultural value chains.

However, expanding agricultural operations requires adequate working capital, efficient logistics, access to appropriate finance, technical capacity, and strong commercial partnerships.

With suitable investment and technical assistance, Oasis aims to strengthen its supply chain, improve inventory availability, expand its rural distribution network, increase produce aggregation capacity, and enhance the reach of its climate-smart agricultural services.

These investments would support business growth while creating opportunities for additional rural enterprises, agricultural workers, and smallholder farmers.

Our Alignment with the Climate Smart Programme

Oasis's business model aligns with the Climate Smart programme's emphasis on private-sector-led agricultural development, climate adaptation, inclusive economic growth, and sustainable job creation.

Our contribution is centred on the practical delivery of agricultural products, services, technology, and market linkages through a scalable rural distribution network.

We see strong opportunities to contribute to programme objectives in the following areas:

Climate resilience: Expanding farmers' access to climate-smart inputs, agronomic information, and practices that support adaptation to changing climatic conditions.

Private-sector growth: Strengthening an established agricultural SME that connects input suppliers, farmers, produce buyers, and other value-chain actors.

Inclusive employment: Expanding rural entrepreneurship and job opportunities through Village Agents, outlets, aggregation, and agricultural services, with particular attention to women and youth.

Agricultural commercialisation: Improving connections between production, input distribution, aggregation, and produce markets.

Sustainable land management: Promoting soil-health improvement and responsible agricultural practices through farmer engagement and strategic partnerships.

Digital innovation: Extending the reach of agricultural learning, advisory information, and market services through OaTech and community-based distribution.

Through these activities, Oasis aims to contribute to a more productive, inclusive, and climate-resilient agricultural economy in Northern Uganda.

Our Vision and Mission

Our Vision

A productive, inclusive, and climate-resilient agricultural sector that creates sustainable livelihoods and economic opportunities for farming communities.

Our Mission

To empower smallholder farmers through accessible, affordable, and innovative agricultural inputs, technology-enabled advisory services, market linkages, and sustainable agribusiness solutions.

Our Vision

To be Uganda's leading agribusiness company, recognised for excellence, innovation, and sustainable agricultural practices.

Our Core Values

I. Integrity- We uphold the highest standards of honesty, transparency, accountability, and ethical conduct in everything we do.
II. Innovation- We embrace new ideas, technologies, and approaches to drive growth, improve service delivery, and create lasting value.
III. Sustainability- We promote responsible agricultural and business practices that benefit our stakeholders, protect the environment, and support long-term resilience.
IV. Customer Focus- Our customers are at the heart of everything we do. We strive to understand their needs and deliver accessible, affordable, and reliable solutions.
V. Teamwork- We collaborate, share knowledge, and combine our strengths to achieve common goals and deliver better results for farmers, customers, and partners.

Our Commitment to Partnership

We believe that lasting agricultural transformation requires collaboration between private enterprises, farmers, financial institutions, technology providers, agricultural input suppliers, produce buyers, government institutions, and development partners.

Oasis welcomes partnerships that strengthen climate-smart agriculture, improve access to finance and markets, support sustainable land management, and create commercially viable employment opportunities.

We are committed to building an agribusiness that delivers value to customers, creates opportunities for rural communities, and contributes to the long-term resilience of Northern Uganda's agricultural economy.
